

# Richter heavy-duty ball valves

– shut-off, control and drain valves –

KN, KNA, KNR, KA-N, KK

ISO/DIN, ASME/ANSI

Lining PFA,  
optionally  
PFA-P, PFA-L, PFA-HP

Maintenance-free  
ENVIPACK stem sealing

-75 to +400 °F (-60 to +200 °C)

**RICHTER**  
Process Pumps & Valves

**IDEX**  
FLUID & METERING

## Heavy duty ball valves with ENVIPACK stem sealing

The ball valve family, KN, excels by offering problem solutions from a modular system. The selection of fluoroplastic linings (i.e. PFA), the large temperature/pressure range and the numerous options permit a tailor-made solution for virtually every application involving highly corrosive and ultrapure media – with more or less the same components!

### The standard KN/KNA modular system:

1 ASME/ANSI + 1 ISO/DIN body, 4 lining materials,

1 universal stem sealing, 4 standard ball versions.

In addition, Richter's speciality: customised special solutions.

### The ball valves of the KN/KNA family are

- Shut-off and control valves for highly aggressive fluids
- For applications where stainless steel, special metals and standard plastics are not sufficiently corrosion-resistant
- The lower-cost alternative to special metals
- Suitable for pure, ultrapure and solids-laden media
- AAR Association of American Railroad certified (KA-N, KNA)

### Product features

- 1-piece, PFA-lined ball/stem, optionally  $\text{Al}_2\text{O}_3$  ball and special versions
- $1\frac{1}{2}''$ -8" and DN 15-200, full bore (apart from 8" and DN 200)

### Type codes

Body ductile cast iron/stainless steel (1"-2")	•/-	•/•	•/-	•/•	•/-	•/-

### ① $1\frac{1}{2}''$ (3.5 mm) Consistent thick lining made of pure PFA

- High permeation resistance
- Vacuum-proof anchoring
- $1\frac{1}{5}''$  (5 mm) wall thickness option ( $\geq 1''/\text{DN } 25$ )
- Optional antistatic lining PFA-L, PFA-HP ultrapure or PFA-P particularly highly permeation-resistant

### ② Body made of ductile cast iron

EN-JS 1049/ASTM A395, absorbs the system and pipe forces.

### ③ Permanently tight body connection

- Allows frequent temperature changes
- Sealing surface ③a with full lining
- Labyrinth-like sealing ③b: maximum surface pressure between the body halves
- Body halves center themselves exactly to each other owing to the fit ③c.
- **Virtual metallic contact** ③d absorbs pipe forces (see page 3)

### ④ Different ball versions (see page 3)

- Standard one-piece ball/stem with  $1\frac{1}{8}''$  (3 mm) lining and stainless steel core
- Eliminates the fits of 2-piece plastic-lined ball/stem versions which are less load-bearing
- Thus optimising operational reliability
- Optional ball versions, see page 3

### ⑤ Resilient PTFE seat rings; spring loaded

Permanent pre-tension of the ball, gas-tight seal

### ⑥ Richter ENVIPACK stem sealing with active stainless steel packing gland follower ⑥a

- Conformity with German Clean Air Act (TA Luft), self-adjusting
- Bellows-type packing insert ⑥b, gas-tight to EN 12266 leakage rate A
- Virtually maintenance-free sealing even with frequent hot/cold cycles
- Visual inspection of the pre-tensioning action
- Can be re-adjusted from outside in a controlled manner ⑥c

### ⑦ Universal ISO 5211 connection

### ⑧ External corrosion protection

Epoxy coating. Stuffing box, lever, screws/nuts made of stainless steel

① On request, flanges drilled to ASME/ANSI Cl.150

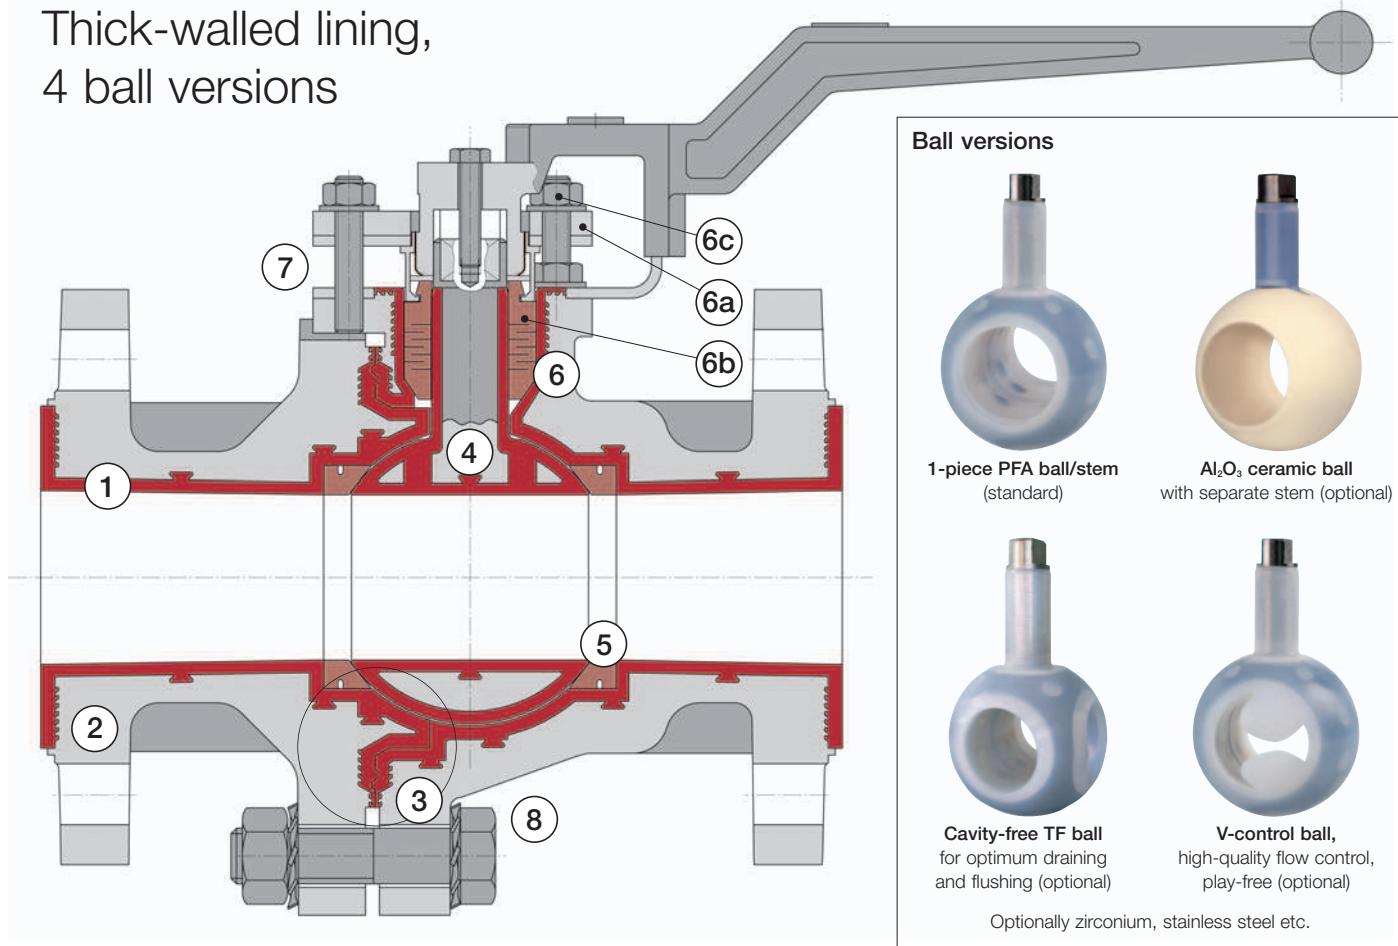

② Special face to face, see tables on page 7

③ Flangeless compact design, face to face = DN + 50 mm

④ Solids: in general, consultation with manufacturer recommended

⑤ Limited suitability

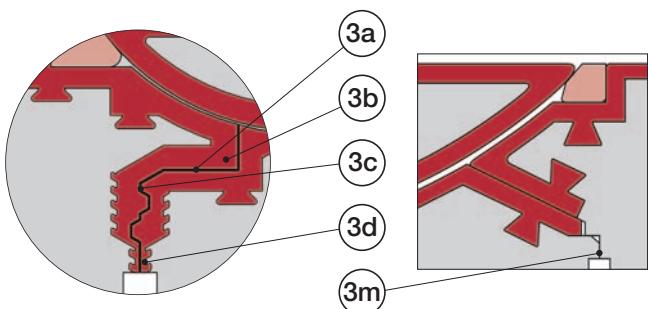

## Thick-walled lining, 4 ball versions

Why “Virtual metallic contact” instead of “metallic contact”?

Richter’s “virtual metal-to-metal contact”, permanently tight:

The body lining ③d tapers to about 0.02" (0.5 mm) permitting the inner flange connection to be retightened. Leakage is highly improbable thanks to the labyrinth-type design ③b typical of Richter.

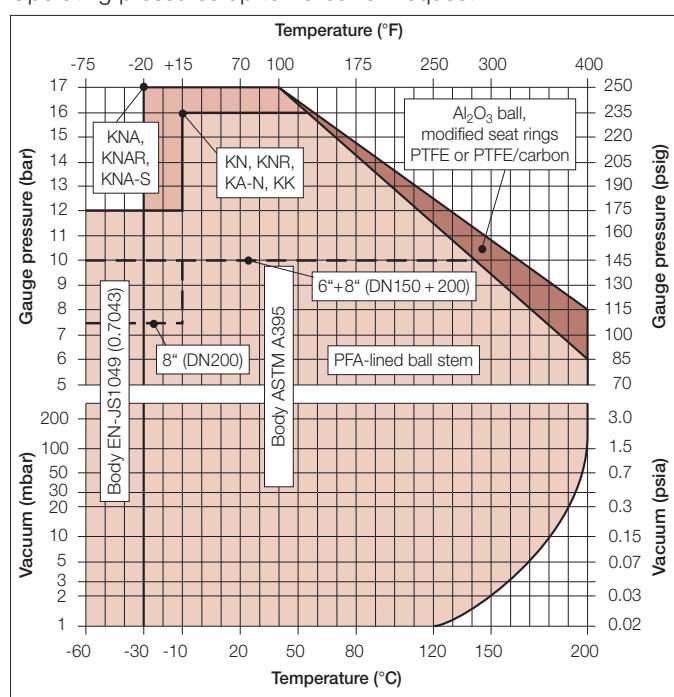

What are the disadvantages of lined valves with “metallic connection”?

The body halves are bolted together with full metallic contact ③m. **Retightening is not possible, any leak that occurs cannot be stopped.** The cavity between the lining and the metallic contact also prevents the early detection of any leak.

### Pressure/temperature range

Operating pressures up to 25 bar on request

Body EN-JS1 049 (0.7043)/PFA:

-75 °F (-60 °C) to 400 °F (+200 °C); max. 235 psi (16 bar) acc. to AD 2000

Body ASTM A395/PFA:

-20 °F (-30 °C) to 400 °F (+200 °C); max. 250 psi (17.2 bar) acc. to ASME B16.42

For applications at low temperatures, please observe the local regulations!

Operating temperatures below 15 °F (-10 °C): special material for ball stem core

## Richter drain reduction valves KA-N with ENVIPACK stem sealing

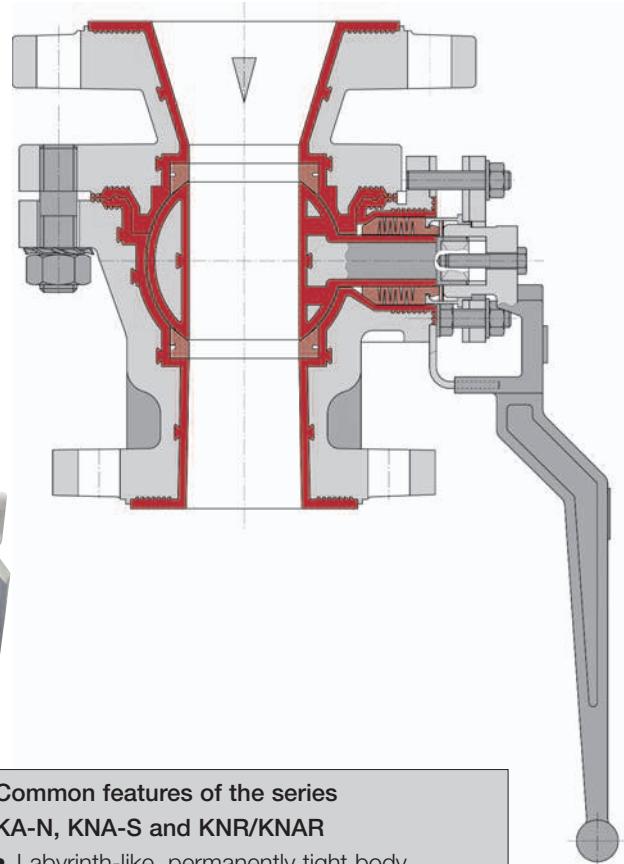

Drain reduction valves are compact, sturdy vessel drain valves and much lower-priced than sliding stem valves.

The KA-N has – apart from the tapered inlet nozzle – the same design as the ball valve series KN.

The pressure/temperature range, design features, material range and the major spare parts are identical.

### Product features

- Full bore
- 2"/1" ( $\varnothing$  1") to 8"/6" ( $\varnothing$  6")/DN 50/25 ( $\varnothing$  25 mm) to 150/100 ( $\varnothing$  100 mm)
- -75 to +400 °F (-60 to +200°C), see diagram on page 3
- Face-to-face: see table on page 7
- Flanges ISO/DIN 7005-2 PN 16, on request, drilled to ANSI B16.10 Cl.150

### Other options:

- High-purity version for pharmaceutical or semiconductor industries
- Body heating jacket, stem extension etc.

## PFA lined stainless steel shut-off and control valves to ASME/ANSI

The PFA-lined stainless steel KNA-S is predestined for the shut-off and control of corrosive fluids.

- In clean-room environments where high-quality exterior surfaces without paint are preferred
- In corrosive atmospheres, e.g. in HF, HNO<sub>3</sub> and pickling plants
- In processes where the fluid itself must not come into contact with ductile cast iron if the lining is damaged.

The pressure/temperature range as well as the components balls, seat rings, stem sealing and valve actuation correspond to those of the KN and KNA series, see page 3.

### Product features

- Precision cast stainless steel 1.4408 (316, CF8M), lining PFA
- Straight-through flow
- 25 mm (1") to 50 mm (2"), other nominal sizes on request
- -75 to +400 °F (-60 to +200 °C), see diagram on page 3
- Very low temperatures down to -400 °F (-200°C) on request
- Face-to-face acc. to ASME/ANSI 16.10/short, face to face ISO/DIN on request
- Flanges ASME/ANSI B 16.10 Cl.150, on request drilled to ISO 7005-2 PN 16.

### Common features of the series

#### KA-N, KNA-S and KNR/KNAR

- Labyrinth-like, permanently tight body connection
- Lining 1/7" (3.5 mm) virgin PFA, optionally PFA-L antistatic or PFA-P highly permeation-resistant
- Self-adjusting, maintenance-free ENVIPACK stem sealing
- Resilient seat rings, gas-tight in the seat
- Conformity with the German Clean Air Act
- Lockable stainless steel lever
- Actuator mounting to ISO 5211, optionally head flange to ISO
- Low-cavity as standard feature
- One-piece PFA ball stem, optionally Al<sub>2</sub>O<sub>3</sub> ceramic ball with separate stem, cavity-free TF ball, all blowout-proof
- Or V-control ball with high-quality control performance for KNR and KNAR

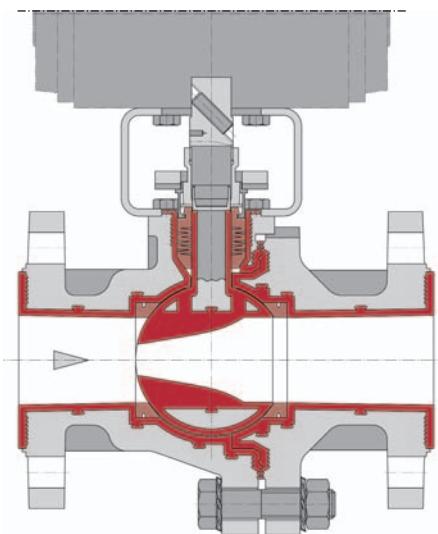

## Richter control valves KNR and KNAR with play-free torque transmission

With the series KNR (ISO/DIN) and KNAR (ASME/ANSI) compact control valves with high control accuracy are available to plant operators. In many applications the KNR/KNAR are economical alternatives to

bellows-type, sliding stem valves. Valve bodies, seat rings and the ENVIPACK stem sealing are identical to those of the shut-off valves KN and KNA as are the selection of material and the pressure/temperature range.

Advantages: minimum stock of spare parts, conversion from shut-off to control valve possible.

### Product features

- 3-6 finely graduated  $k_{vs}$ /Cv-values per nominal size
- Equal percentage characteristic acc. to DIN EN 60534, linear by means of positioner
- 1/2" to 8" (DN 15-200)
- -75 to +400 °F (-60 to +200 °C), see diagram on page 3
- Face-to-face according to
  - ISO/DIN 5752 R.1 (apart from DN 200/8")
  - ASME/ANSI B 16.10/8, Cl.150
- Flanges to
  - ISO/DIN 7005-2 PN 16 (8" (DN 200); PN 10), 1"-3" (DN 25-80) optionally PN 25 with PB 16 bar,
  - ASME/ANSI B16.5 Cl.150

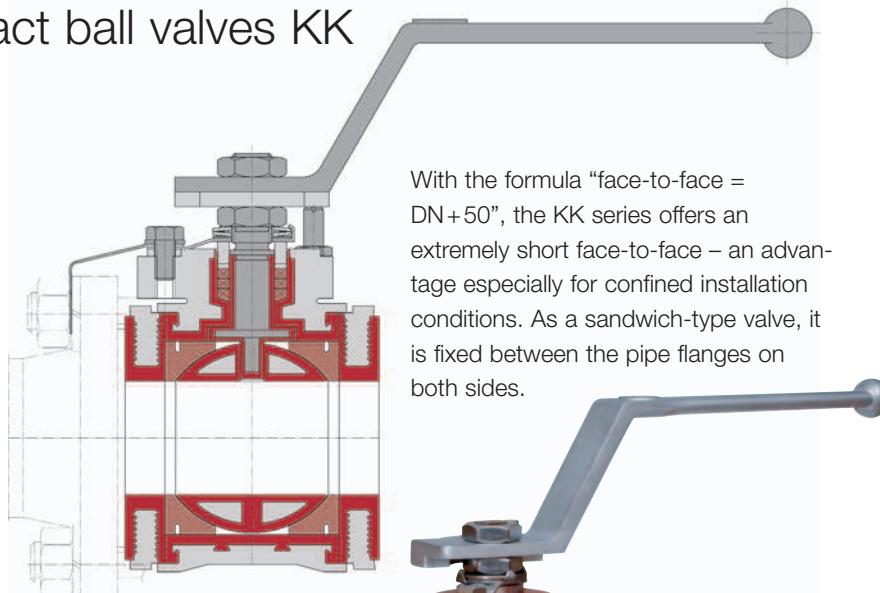

### Other options:

- Extra thick body lining: 1/5" (5 mm) PFA for permeating media
- High-purity version for pharmaceutical and semiconductor industries
- Body heating jacket

## Richter flangeless compact ball valves KK

### Product features

- Lining 1/7" (3.5 mm) virgin PFA
- Body of ductile cast iron EN-JS 1049 (ASTM A395)
- 1"-6" (DN 25-150), PN 16 (6" (DN 150) = PN 10)
- Full bore with 1"-2" (DN 25-50), reduced bore with  $\geq 2\frac{1}{2}"$  (DN 65)
- -75 to +360 °F (-60 to +180 °C)
- Flangeless, face-to-face: 2" (DN+50 mm), e.g. 2" (DN 50) = 4" (100 mm)
- Self-adjusting, maintenance-free stem sealing
- Resilient seat rings, gas-tight in the seat
- Conformity with German Clean Air Act
- TÜV AGG-certified to "dangerous goods" GGVSE/ADR/RID ch. 6.8
- Stainless steel lever
- Actuator mounting to ISO 5211
- PFA ball with separate stem,  $\text{Al}_2\text{O}_3$  ceramic ball option, blowout-proof
- Stainless steel grounding rope

With the formula "face-to-face = DN+50", the KK series offers an extremely short face-to-face – an advantage especially for confined installation conditions. As a sandwich-type valve, it is fixed between the pipe flanges on both sides.

### Other options:

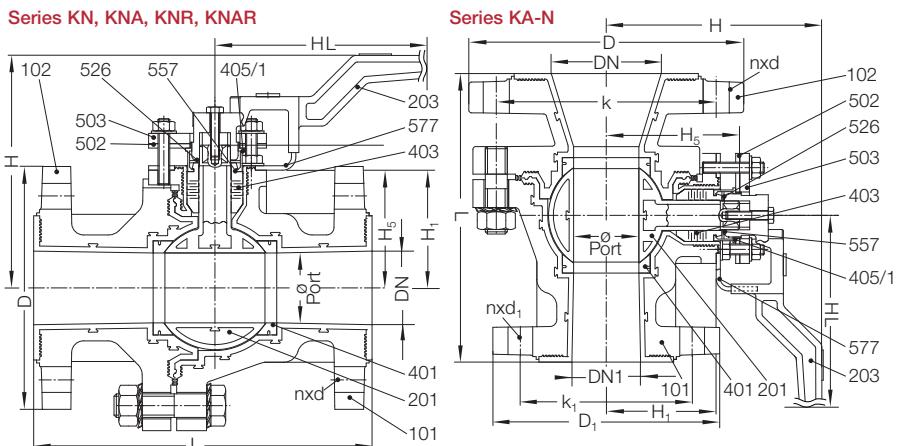

- Stem extension
- Different ball materials
- Low-cavity (see Fig.)

## Components and materials, operating torques, $k_v/Cv$ -values

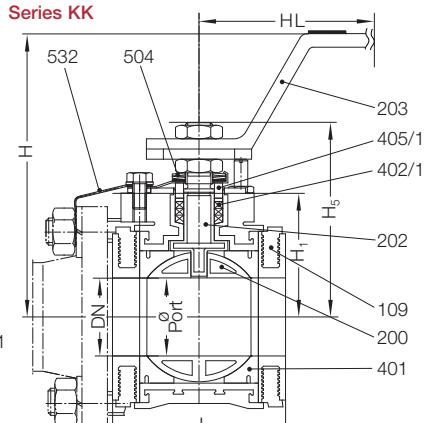

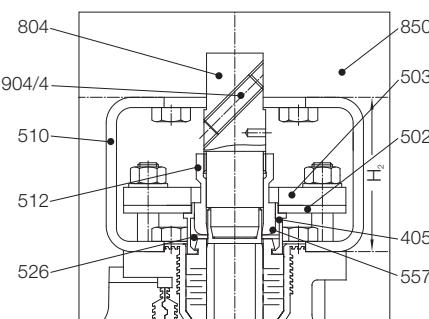

### Components and materials

Item	Designation	Material
101	Main body	Ductile cast iron EN-JS1049 (ASTM A395), PFA-lined optionally PFA-L antistatic or PFA-P highly permeation-resist.
102	Body end piece	
109	Transition cover	Stainless steel/PTFE
200	Ball	$\text{Al}_2\text{O}_3$ 99,7 %, stainl. steel/PFA (only KK)
201	Ball stem unit	Stainless steel, PFA-lined optionally PFA-L antistatic or PFA-P highly permeation-resist.
202	Stem	
203	Lever	Stainless steel
401	Seat rings	PTFE ( $\text{Al}_2\text{O}_3$ ball: TFM-PTFE)
402/1	Packing ring	PTFE
403	Packing bellows	PTFE
405/1	Thrust ring	Stainless steel
502	Spring gland follower	Stainless steel
503	Packing gland follower	Stainless steel
504	Cup spring assembly	Stainless steel
510	Bracket	Stainless steel
512	Sleeve nut	Stainless steel
526	Retaining washer	Stainless steel
532	Grounding rope	Stainless steel
557	Grounding spring washer	Stainless steel
577	Lever stop	Stainless steel
804	Coupling, play-free	Stainless steel
850	Actuator	to customer request
904/4	Setscrew	Stainless steel
w/o Nr.	Screws and nuts	Stainless steel

All torques: Test medium water 20 °C, seat rings of pure PTFE. The torques may vary depending on the medium (dry gases, crystallising media, oil contents etc.)

### Play-free coupling for KNR, KNAR

\* 6" (DN 150) and 8" (DN 200): At Δp > approx. 29 psi (2 bar) a worm gear is recommended instead of the hand lever. Details on request.

\*\* On request: drilled to JIS 10K, ISO 7005-2

\*\*\* face-to-face not to ASME/ANSI

### KA-N: Installation dimensions and approx. weights

Special face-to-face, flanges ISO 7005-2 (optionally drilled to ASME/ANSI B16.5 Cl.150)

## Richter's speciality: customised problem solutions

Ask Richter when you are looking for a solution to your problem!

In addition to the selection of common special designs presented here, we also offer many other specialities.

### Lever extension

from 4" to 90" (100 mm to 2000 mm)

### Stainless steel heating jacket

for all standard heat transfer media

### Lockable lever as standard feature (KN, KNA)

### Special manual actuations

e.g. limit switch, locking, oval handwheel, manual gear

### Extra thick-walled lining 1/5" (5 mm)

for highly permeating media

### Ball with relief opening

for pressure relief of the ball interior in the closed position
